

## HSPK2 Submersible Pump Kits

HSPK Submersible Pump kits are specially designed for joining Flat Ribbon cable from Submersible Pumps to round circular cable. Extra adhesive has been put into the RTW sleeve to make sure all the voids are filled and there is not requirement for the use of mastic layers or tape.

The Shrink ratio has been increased to 4.5:1 to accommodate a wider range of cables.

HSPK Submersible Kits have been in the Australian market for 15 years now and have a reputation as on of the best solutions for this application

### **Kit Contents:**
